

## Learning objectives

This list identifies the goals for the **minimum skills and knowledge** required to perform the care appropriate to your child. You and the healthcare team may use it as a guide and checklist for learning.

**Instructions:** When the learning is satisfactory to the nurse and to the parent, both will write their initials in the table and put their name and signature at the end where indicated.

The family/caregiver (and child, if appropriate) know:	Date	Initials Nurse	Initials Parent
the functioning of healthy kidneys and kidneys with chronic kidney disease			
the characteristics of the peritoneum			
the functioning of peritoneal dialysis			
the specifics of the dialysate bags relevant to the child			
the functioning of the cycler, if relevant			
possible alarm situations of the cycler and how to correct them			
how to monitor blood pressure, pulse, weight and ultrafiltration			
signs of fluid overload and dehydration			
aseptic measures according to the care setting			
basic procedures to be followed before each method of care			
contamination situations and the actions to be taken			
all the steps for catheter insertion site care: sterile or non-sterile method, depending on			
the relevance			
all the steps for assembling the cycler			
instructions for preparing the dialysate bags including the 5 L Physioneal, if required			
all steps for adding medication to the dialysate bag, if necessary			
all steps for connecting to the cycler			
all steps for disconnecting the cycler			
all steps for effluent specimen collection per drainage bag and per specimen bag, if			
required			
potential problems and recommended solutions			
advice on the activities of daily living of the child under peritoneal dialysis (clothing, nutrition, hydration, bathing, sleep, activities and transportation)			
reasons for consulting the healthcare team
